Tunnel Metal Detectors DMT3A(B, V,...)

Intended for metallic extraneous impurities (ferrous and non-ferrous as well as manganese steel) in the flows of non-metallic products that are moved by conveyor belt with the purpose to protect technological equipment from damage. Can work on conveyor belts the joints of which are connected with the application of metallic elements, take minutes events with a further revision on the metal detector's display.

Installed at the enterprises of macadam production, brick and cement plants and other industries.
